

SpeedCloud® Service Offerings

The technology that empowers *SpeedCloud*® will bolster your idea too:

Open Source Ecosystem

Fostering principles of platform-neutral open infrastructure for pure upstream open source technologies

SpeedServer

SpeedServer is built for enterprises, start-ups, SMEs and developers seeking higher performance, consistently lower costs, and easier cloud migration for their workloads/applications hosted on their existing on-premise or off-premise, on the pay-per-use model with on-demand elastic infrastructure. Save up to 67% over AWS , get 4X better price-performance and on-demand customizable compute instances.

Managed Kubernetes

“Managed Kubernetes” is when service providers take over responsibility for some or all of the work necessary for the successful set-up and operation of K8s (Kubernetes Cluster). Depending on the requirements, “managed” can refer to anything from deployment support, to hosting with pre-configured environments, to full hosting and operation. It is a way to capitalize on the open source Kubernetes platform by adding value through managed services. Organizations that want to use Kubernetes benefit, too. With managed Kubernetes, customers get easy access to a Kubernetes cluster without having to set up and maintain it themselves.

SpeedCloud® Service Offerings

Backup2cloud

SpeedCloud® Backup2Cloud is enabled with Industry's leading back-up to cloud platform i.e., Veeam. It is offered as Self-service and can handle comprehensive back-ups for all workloads – Physical, Virtual.

Active Archival

Preserve and protect your data with *SpeedCloud®* Active Archival. Maintaining data availability is essential for the performance and business continuity of every organization. Built on open-source Ceph, *SpeedCloud®* Active Archival assures long-term and continued data availability & access. With no upload/retrieval charges, performance 5 times faster than Glacier, and zero waiting time, experience hassle-free access and availability of your data.

SpeedCloud® Active Archival is truly a high-performance, scalable, secure, and cost-effective archival solution for instant and easy access to your data.

SpeedCloud Edge

NxtGen *SpeedCloud®* Edge simplifies the deployment and management of container-based applications and workloads at the network edge. The platform provides a distributed, centrally managed Kubernetes infrastructure, Intel® Smart Edge Open, the Intel® Distribution of OpenVINO™ toolkit, and Open Source. *SpeedCloud®* Edge is part of a broader set of offerings from NxtGen, including *SpeedCloud®* Core. Together, these components form the *SpeedCloud®* public cloud computing platform. The solution abstracts away the complexity of provisioning and maintaining cloud infrastructure, so IT organizations can increase their effectiveness by focusing on more value-added activities. The *SpeedCloud®* platform as a whole enables management of the cloud from the edge to core as a single entity.

SpeedCloud® HPC-aaS

SpeedCloud® HPC-aaS Cluster is powered by HPC-Cray for industry leading performance, scale built on the 2nd Generation Intel® Xeon® 9200 family of processors which offer unmatched 2-socket performance leadership across popular workloads. Built to support both liquid-cooled and air-cooled options, the HPE Apollo 20 System takes advantage of the Hewlett Packard Enterprise experience in HPC cooling technologies as workloads continue to push power and density. The Cluster houses high speed INFINIBAND EDR interconnects and for efficiently handling large datasets for your simulations, data analytics and innovative AI/ML emerging technology workloads. NxtGen HPC clusters provide higher TCO since the resources are offered on demand and full managed and maintained by NxtGen, the customer subscribed the service and consumes resources customized to his needs without any upfront investment.
